Each act, big or small, can make a difference – or at least help a friend. What does it mean to be kind? From asking the new girl to play to standing up for someone being bullied, this moving and thoughtful story explores what a child can do to be kind. The next title in this best-selling sound series reimagines *Carnival of the Animals*, one of the most famous suites of music for children, by Camille Saint-Saens. A captivating history of the universe -- from before the dawn of time through the far reaches of the distant future. Most historians study the smallest slivers of time, emphasizing specific dates, individuals, and documents. But what would it look like to study the whole of history, from the big bang through the present day -- and even into the remote future? How would looking at the full span of time change the way we perceive the universe, the earth, and our very existence? These were the questions David Christian set out to answer when he created the field of "Big History," the most exciting new approach to understanding where we have been, where we are, and where we are going. In *Origin Story*, Christian takes

readers on a wild ride through the entire 13.8 billion years we've come to know as "history." By focusing on defining events (thresholds), major trends, and profound questions about our origins, Christian exposes the hidden threads that tie everything together -- from the creation of the planet to the advent of agriculture, nuclear war, and beyond. With stunning insights into the origin of the universe, the beginning of life, the emergence of humans, and what the future might bring, Origin Story boldly reframes our place in the cosmos. Make the teaching of Maths a more exciting and creative cross-curricular experience! This innovative series provides original and fun stories, sketches and poems to use as the basis for teaching objectives from the Mathematics Programme of Study. The stories are supported by differentiated lesson plans and original resources such as card games and suggestions for kinaesthetic activities. Ages 7-9 stories include: Round up Rebellion, Dodgy Divisions, Decimal Dilemma, Right Angle Tangle, The Unsquare Square, Mad Measures, One Out of Two People, Time Table Poems, Metric v Imperial Poem. The stories have been road-tested in schools and the children thoroughly enjoyed them! This edited book draws from work that focuses on the act of telling family stories, as well as their content and structure. The process of telling family stories is linked to central aspects of development, including language acquisition, affect regulation, and family interaction patterns. This book extends across traditional developmental psychology, personality theory, and family studies. Drawing broadly on the epigenetic framework for individual development articulated by Erik Erikson, as well as on conceptions of the family life cycle, the editors bring together contemporary examples of psychological research on family stories and their

implications for development and change at different points in the life course. The book is divided into sections that focus on family stories at different points in the life cycle, from early childhood and the beginnings of narrative skill, through adolescence, young adulthood, midlife, and then mature adulthood and its intergenerational meaning. During each of these periods of the life cycle, research focusing on individual development within an Eriksonian framework of ego strengths and virtues is highlighted. The dynamic role of family stories is also featured here, with work exploring the links between family process, intergenerational attachment, and storytelling. Sociocultural theories that emphasize how such development is situated in the wider cultural context are also featured in several chapters. This broad lifespan developmental focus serves to integrate the exciting diversity of this work and foster further questions and research in the emerging field of family narrative. The book is intended primarily for researchers and advanced-level students in the fields of developmental and personality psychology, as well as those in family studies and in gerontology. It may also be of interest to those in the helping professions who are concerned with family therapy and family issues, and may--due to its content and illustrative material--have appeal to a wider market of the lay public. The chapters are written in a readily accessible style and the analyses are presented in a fairly non-technical way. Because family stories are charted across the lifespan, it would be a suitable companion book to a more traditional lifespan textbook in certain courses. "Engaging. . . . The text and illustrations exude the glamour, passion, and lyricism of opera."—Publishers Weekly Jane Rosenberg's delightful retellings for children of the greatest operas—whether the tales are read as introductions to a opera or to relive a production

already seen, art and text combine to give a clear understanding of plot, scene, and character. Young children in particular will enjoy reading the stories—or having them read—both as lovely fairy tales and to help them share in the magic of a real dramatic performance. Here are the gaiety of *The Barber of Seville* and the lavish spectacle of *Aida*. Sets, costumes, and lighting are re-created to give the true flavor of authentic productions and to approximate, as fully as possible, the experience of attending the opera oneself.
