Miami University in Oxford, Ohio offers a course entitled "Sustainability Perspectives," based on this text. The

course was awarded "The Instructional Innovation Award" at the 1996 annual meeting of the Decision Sciences Institute, an association of Decision Science professionals headquartered at Georgia State University in Atlanta. The 1990's have seen the development of important new approaches to sustaining corporate development and protecting the environment. Corporations are beginning to realize their responsibilities for a healthy environment. Sustainable development is viewed as an integrated, ecological, economic, and social system in which both economic growth and quality-of-life improvements can occur in a unified system complementary to the maintenance of natural capital. Sustainability Perspectives for Resources and Businesses shows the reader that a sound understanding of the concepts involved in sustainable development is beneficial to businesses, natural resources, and the population in general. This textbook was written to help students and professionals involved in business, science, or engineering to understand the changes occurring in the workplace. It serves as a step toward understanding how business and science, as professional communities, are adapting to new information about risks to the environment. Various chapters are devoted to resources, values, and valuation systems. Each section develops principles such as resilience and integrity in the economy and the environment. An ideal textbook for classes on modern airpower and joint operations. Through an insightful look at projects from around the world and at the current design proposals for New York itself, the author paints a portrait of redevelopment that is both pragmatic and visionary, one that holds the promise of reconnecting New Yorkers to their waterfront as a vital place of work and of public life."--BOOK JACKET. An overview of the role of institutions and organisations in the development of corporate finance. By September 1944, the Allied advance across France and Belgium had turned into attrition along the German frontier. Standing between the Allies and the Third Reich's industrial heartland was the city of Aachen, once the ancient seat of Charlemagne's empire and now firmly entrenched within Germany's Siegfried Line fortifications. The city was on the verge of capitulating until Hitler forbade surrender. • Dramatic story of the American battle for Aachen, the first city on German soil to fall to the Allies in World War II. • Chronicles the six weeks of hard combat for the city, culminating in eight days of fighting in the streets • Details the involvement of some of the U.S. Army's finest units, including the 1st Infantry Division ("Big Red One"), the 30th Infantry Division ("Roosevelt's SS"), and the 2nd Armored Division ("Hell on Wheels") This is the most comprehensive review of maritime cabotage law. It introduces the new theory of Developmental Sovereignty to jurisprudence. The maritime cabotage law provisions and approaches as adopted in many states and jurisdictions has been extensively scrutinised. This book challenges the established and accepted wisdom surrounding maritime cabotage by presenting new reasoning on the underpinning principles of the concept of maritime cabotage law. The book offers a vibrant discussion on the adjustment in the regulatory approaches of maritime cabotage, from one that was intrinsically premised on the idea of national sovereignty, to one that now embraces the broader ideology of development. It investigates what the common understanding of the law of maritime cabotage should be and on what intellectual basis it can be justified. It reduces the inconsistencies and confusion that surround the concept and application of maritime cabotage law, to provide a more certain and more robust concept of maritime cabotage. This third volume of the Pan-African Chronology set covers 1914 through 1929, a time of two seminal events: World War I and the Black Awakening. In World War I, people of African descent fought for both sides, earning distinction on the battlefields of France as well as in the jungles and deserts of Africa. The "Black Awakening," a period from 1919 through 1929, marked the dawning of global awareness of the contributions of African people to the culture of the world. The book is arranged by year and events of each year are grouped by region. It also has two special biographical divisions for W.E.B. DuBois and Marcus Garvey. The Hong Kong Marine Police have patrolled Hong Kong's water for a hundred and fifty eventful years, during a time which has been tumultuous, even for the China Coast. Pirates, typhoons, wars, triumphs and defeats have all played a part in their story, which in many ways reflects that of Hong Kong itself. This book tells of the unit's first 109 years, from the tentative rowing patrols of Hong Kong Harbour in 1841 to the gunboats of the 1930s and the ragged flotilla which reinstated the rule of law after the cataclysm of World War II. Where possible the story is told by the men who lived it, and their words bring to life this account of a unique multi-cultural unit. This 1989 book covers the geology and geomorphology of the Carboniferous Limestone areas of Wales, and summarises the state of knowledge of the main cave systems including the longest and deepest in Britain. It sets out to assess the morphological evolution of the cave systems and the associated landscape features, particularly in light of the effects of successive glaciations. The book also covers related subjects including the biology of the cave faunas, important archaeological discoveries in Welsh caves and the hydrology of the limestone masses. On its publication, this was the first book to give a general survey of the subject. It will continue to provide a valuable reference for cavers and also for geologists, geographers, biologists and archaeologists with special interests in the area. Microbes are of key importance in the production, deposition and diagenesis of sediments. This volume provides a comprehensive overview of microbial sediments. It contains authoritative and stimulating contributions

by distinguished authors that cover the field and set the scene for future advances. It deals with mats and biofilms, biosedimentary precipitates, fabrics and diagenesis in a wide range of sedimentary environments, and it examines the development of microbial sediments through time. It is designed for postgraduate researchers and professional scientists who require up-to-date information on the influence of microorganisms on sedimentation.
