The 21st century has brought with it unprecedented challenges. Health and environmental effects of toxins introduced in the last half century have led to reductions in life expectancy, reproductive health, and quality of life and increases in anti-nutrients, loss of quality soil, impaired immune defense and repair, and digestive disorders. Despite these challenges, there are still remarkable opportunities for those who choose more wisely. This book is a guide to reconnecting and rediscovering your healing capacities by embracing a nature, nurture, and wholeness approach to life. Thought-leading scientist and integrative health-care pioneer, Russell Jaffe, MD, PhD, CCN shares wisdom gained over half a century in medicine, science, and spiritual practices that have taught him how to live long and well, especially in times of unprecedented stress and toxins. His approach is personal, evidence-based and consists of practical ways of saving your life and the life of those about whom you care. Starting with today's scientific evidence and incorporating wisdom traditions, Dr. Jaffe invites the reader on a journey of self-assessment, self-discovery, and self-awareness. You are unique. Your chemistry, your relationships, and your history all interconnect to make you who you are. Dr. Jaffe explains what to measure, what the measurements mean functionally, and what to do to overcome the challenges of the 21st century and add decades of quality life. "I have observed several hundred salespeople who were taught to use deceptive practices like 'bait and switch' and encouraged to play negotiation games with customers... In the same industry, I have observed countless people who had been taught to sell with high integrity. Ironically, their customer satisfaction, profit margins, and salesperson retention were significantly higher." — Ron Willingham If you've tried manipulative, self-focused selling techniques that demean you and your customer, if you've ever wondered if selling could be more than just talking people into buying, then Integrity Selling for the 21st Century is the book for you. Its concept is simple: Only by getting to know your customers and their needs — and believing that you can meet those needs — will you enjoy relationships with customers built on trust. And only then, when you bring more value to your customers than you receive in payment, will you begin to reap the rewards of high sales. Since the publication of Ron Willingham's enormously successful first book, Integrity Selling, his sales program has been adopted by dozens of Fortune 500 companies, such as Johnson & Johnson and IBM, as well as the American Red Cross and the New York Times. In his new book, Integrity Selling for the 21st Century, Willingham explains how his selling system relates to today's business climate — when the need for integrity is greater than ever before. Integrity Selling for the 21st Century teaches a process of self-evaluation to help you become a stellar salesperson in any business climate. Once you've established your own goals and personality traits, you'll be able to evaluate them in your customers and adapt your styles to create a more trusting, productive relationship. Drawing upon Willingham's years of experience and success stories from sales forces of the more than 2,000 companies that have adopted the Integrity Selling system, Ron Willingham has created a blueprint for achieving success in sales while staying true to your values.

Essays by artists, politicians, scientists, and philosophers discuss the major issues facing humanity in the next century. The book presents the newest results of the major world research groups working in the area of Variable Structure Systems and Sliding Mode Control (VSS/SMC). The research activity of these groups is coordinated by the IEEE Technical Committee on Variable Structure Systems (VSS) and Sliding Modes (SM). The presented results include the reports of the research groups collaborating in a framework of the Unión Europea Union – México project of Fondo de Cooperación Internacional en Ciencia y Tecnología (FONCICYT) 93302 titled "Automatization and Monitoring of Energy Production Processes via Sliding Mode Control". The book starts with the overview of the sliding mode control concepts and algorithms that were developed and discussed in the last two decades. The research papers are combined in three sections: Part I: VSS and SM Algorithms and their Analysis; Part II: SMC Design; Part III: Applications of VSS and SMC. The book will be of interests of engineers, researchers and graduate students working in the area of the control systems design. Novel mathematical theories and engineering concepts of control systems are rigorously discussed and supported by numerous applications to practical tasks.

In this revised and updated third edition of *China in the 21st Century: What Everyone Needs to Know*® Jeffery N. Wasserstrom and Maura Elizabeth Cunningham provide an excellent introduction to this significant global power. In spite of the debate about secularization or de-secularization, the existential-bodily need for religion is basically the same as always. What have been changed are the horizons within which religions are interpreted and the relationships within which religions are integrated. This book explores how religions continue to challenge secular democracy and science, and how religions are themselves being challenged by secular values and practices. All traditions - whether religious or secular - experience a struggle over authority, and this struggle seems to intensify with globalization, as it has brought people around the world in closer contact with each other. In this book internationally leading scholars from sociology, law, political science, religious studies, theology and the religion and science debate, take stock of the current interdisciplinary research on religion and open new perspectives at the cutting edge of the debate on religion in the 21st century. Those who believe Europe to be weak and ineffectual are wrong. Turning conventional wisdom on its head *Why Europe Will Run the 21st Century* sets out a vision for a century in which Europe will dominate, not America. This is the book that will make you think about Europe. Identifies the major weaknesses in the current United Nations system and proposes fundamental reforms to address each. This title is also available as Open Access.

Understanding of the theories that underpin international political economy (IPE), and their practical applications, is crucial to the study of international relations, politics, development and economics. This is a comprehensive and accessible introduction to the field, with an engaging and coherent foundation to the subject. It considers traditional and alternative approaches to IPE, and in doing so elucidates key concepts, assumptions and the intellectual and historical context in which they arose and developed. At all times, it makes clear their relevance to issues from trade, finance and government, to environment, technology, health, labour, security, migration, development and culture. The book encourages independent reflection and critical thinking through a range of in-text guiding features. In addition, each chapter presents theoretical analysis alongside contemporary issues, helping the reader to relate to the real world of IPE and to better understand how theory helps inform interpretation of it. New to this edition: comprehensively updated to include key coverage of the post-2015 framework of the Sustainable Development Goals, the financial crisis and international government responses - successful or otherwise - to recent challenges; fully updated data, reflective questions, recommended readings, concept and example boxes, and illustrations; new chapters on health, migration and labour; additional coverage of trade theories and key contemporary issues, such as national versus human security, economic versus human development and illegal networks in global trade. Technological developments have enabled a dramatic expansion and also an evolution of telework, broadly defined as using ICTs to perform work from outside of an employer's premises. This volume offers a new conceptual framework explaining the evolution of telework over four decades. It reviews national experiences from Argentina, Brazil, India, Japan, the United States, and ten EU countries regarding the development of telework, its various forms and effects. It also analyses large-scale surveys and company case studies regarding the incidence of telework and its effects on working time, work-life balance, occupational health and well-being, and individual and organizational performance. The field of photonic band gap (PGB) materials, also called photonic crystals, is one of the most exciting new areas in physics and engineering. The materials play a unique role in controlling the propagation of electromagnetic waves, and innovative ways to manipulate such waves can have a profound influence on science and technology. The present book provides an excellent survey of the field of photonic crystals, random lasers and light localization, covering theoretical

and experimental aspects as well as applications. The introductory lectures are accessible to non-specialists. New fabrication techniques and structures are presented with either dielectric or metallic components. Microwave, far-IR and optical applications are discussed (filters, mirrors, switches, waveguides, bends, splitters, antennas, etc.). Transmission, band structure and finite difference-time domain techniques are presented. Reviews of the random laser area and light localization are also presented. This dynamic approach to an exciting form of teaching and learning will inspire students to gain insights and complex thinking skills from the school library, their community, and the wider world.

Defence Industries in the 21st Century explores the transformation in the global defence industrial production through examining the interaction between international and domestic factors. With the global defence industry and arms market likely continue to expand and mature, the ways in which this progression could influence international politics remain obscure. In practice, as the contents of this book show, the defence industrial bases and arms export policies of emerging states display significant variance. This variance is the result of a unique balance between domestic and international factors that has shaped the defence industrialisation behaviour and policies of the less industrialised states. One of the most important conclusions of the book is that the interplay between domestic and international factors clearly influences the variation in the emerging states' defence industrialisation policies, as well as their success or failure. While international factors create opportunities, they also limit the options available to emerging economies. Domestic factors also play an important role by shaping the policy choices of the states' decision makers. Exploring the balance between international and domestic factors and the ways in which they influence defence industrialisation in emerging states, *Defence Industries in the 21st Century* will be of great interest to scholars of Defence Industries, Arms Manufacturing, and Defence, Strategic and Security Studies more generally. The chapters were originally published in *Defence Studies*, *Comparative Strategy* and *All Azimuth*. "Small Business Management in the 21st Century offers a unique perspective and set of capabilities for instructors. The authors designed this book with a "less can be more" approach, and by treating small business management as a practical human activity rather than as an abstract theoretical concept. The text has a format and structure that will be familiar to you if you use other books on small business management. Yet it brings a fresh perspective by incorporating three distinctive and unique themes and an important new feature (Disaster Watch) which is embedded throughout the entire text. These themes assure that students see the material in an integrated context rather than a stream of separate and distinct topics."--Open Textbook Library. For decades, liberal democracy has been extolled as the best system of governance to have emerged out of the long experience of history. Today, such a confident assertion is far from self-evident. Democracy, in crisis across the West, must prove itself. In the West today, the authors argue, we no longer live in "industrial democracies," but "consumer democracies" in which the governing ethos has ended up drowning households and governments in debt and resulted in paralyzing partisanship. In contrast, the long-term focus of the decisive and unified leadership of China is boldly moving its nation into the future. But China also faces challenges arising from its meteoric rise. Its burgeoning middle class will increasingly demand more participation, accountability of government, curbing corruption and the rule of law. As the 21st Century unfolds, both of these core systems of the global order must contend with the same reality: a genuinely multi-polar world where no single power dominates and in which societies themselves are becoming increasingly diverse. The authors argue that a new system of "intelligent governance" is required to meet these new challenges. To cope, the authors argue that both East and West can benefit by adapting each other's best practices. Examining this in relation to widely varying political and cultural contexts, the authors quip that while China must lighten up, the US must tighten up. This highly timely volume is both a conceptual and practical guide of impressive scope to the challenges of good governance as the world continues to undergo profound transformation in the coming decades. This book describes emerging and unresolved sustainability issues related to the oceans and marine environment, for policy makers, students and academics. *Management Challenges for the 21st Century* looks afresh at the future of management thinking and practice. This astonishing new book from the world's leading management guru revolves around two fundamental issues that are occurring simultaneously: changes in the world economy, and shifts in the practice of management. These developments, especially in developed countries, are crucial in exploring and understanding the challenges of the future. *Management Challenges for the 21st Century* focuses in on the key questions for all businesses: · What are the new realities? · What new policies are required of companies and executives in order to deal with these changes? Facing a whole swathe of issues head-on in his usual clear-sighted style, Drucker offers up a prescient and informed analysis that will help every executive to build a proactive strategy for the future.

*Written by one of the world's leading management gurus *Deals with the pressing challenges facing all organizations in the 21st century *Offers clear-sighted analysis and advice

The United Nations in the 21st Century, Sixth Edition, provides a comprehensive yet accessible introduction to the UN. It explores the historical, institutional, and theoretical foundations of the UN as well as major global trends and challenges facing the organization today, including changing major power dynamics, new threats to peace and security, the migration and refugee crises, the COVID-19 pandemic, and the existential challenges of climate change and sustainability. Thoroughly revised and expanded, it contains two new chapters on the UN and the environment and on human security, including issues of health, food security, global migration, and human trafficking. There is enhanced analysis of theoretical perspectives on post-colonialism, feminist theory, constructivism, and non-Western views. New content has also been added on the UN's budget crisis, public-private partnerships, and the role of women in the organization. By examining the UN as an intergovernmental organization facing the broader need for global cooperation to address economic, social, and environmental interdependencies alongside the threats posed by rising nationalism and populism, this popular text is the perfect reference for all students and practitioners of international organizations, global governance, and international relations.

Bilingual Education in the 21st Century examines languages and bilingualism as individual and societal phenomena, presents program types, variables, and policies in bilingual education, and concludes by looking at practices, especially pedagogies and assessments. This thought-provoking work is an ideal textbook for future teachers as well as providing a fresh view of the subject for school administrators and policy makers. Provides an overview of bilingual education theories and practices throughout the world Extends traditional conceptions of bilingualism and bilingual education to include global and local concerns in the 21st century Questions assumptions regarding language, bilingualism and bilingual education, and proposes a new theoretical framework and alternative views of teaching and assessment practices Reviews international bilingual education policies, with separate chapters dedicated to US and EU language policy in education Gives reasons why bilingual education is good for all children throughout the world, and presents cases of how this is being carried out

In the late eighteenth century, the political economist Adam Smith predicted an eventual equalization of power between the West and the territories it had conquered. In this magisterial new work, Giovanni Arrighi shows how China's extraordinary rise invites us to reassess radically the conventional reading of *The Wealth of Nations*. He examines how recent US attempts to create the first truly global empire were conceived to counter China's spectacular economic success Now America's disastrous failure in Iraq has made the People's Republic of China the true winner in the US War on Terror. China may soon become again the kind of noncapitalist market economy that Smith described, an event that will reconfigure world trade and the global balance of power. The 21st Century Art Book is an A-to-Z guide of contemporary artists featuring established art world figures – Maurizio Cattelan, Cindy Sherman, Jeff Wall – alongside rising stars of the next generations. Global in scope, the book features work from 50 countries across a variety of mediums, from painting, drawing, and sculpture to digital art, video installation, and performance. Each of the 280 artists included has a dedicated page pairing a significant artwork from his or her oeuvre with lively and informative text. An international directory of major art events along with a helpful glossary round out the package, making this both a must-have resource and a beautifully illustrated celebration of contemporary art. Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events, thinking of a long-lost friend just before he or she unexpectedly calls, or the ability to "feel" the presence of deceased loved ones. What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists, including Nobel laureates. Most of these researchers have concluded that some of these phenomena do occur, although we are far from explaining them to everyone's satisfaction. This book is the first in almost 40 years to provide a comprehensive scientific overview of research in the field of parapsychology, explaining what we know and don't know about so-called psi phenomena, such as "telepathy," "precognition" or "psychokinesis." Contributors evaluate the evidence for these phenomena, accounting for factors such as selective memory, wish fulfillment and incorrect methods or analyses, in some cases offering psychological, physical and biological theories. Instructors considering this book for use in a course may request an examination copy here. ****THE NUMBER ONE BESTSELLER****

In twenty-one bite-sized lessons, Yuval Noah Harari explores what it means to be human in an age of bewilderment. '21 Lessons is, simply put, a crucial book' Adam Kay How can we protect ourselves from nuclear war, ecological cataclysms and technological disruptions? What can we do about the epidemic of fake news or the threat of terrorism? What should we teach our children? Yuval Noah Harari takes us on a thrilling journey through today's

most urgent issues. The golden thread running through his exhilarating new book is the challenge of maintaining our collective and individual focus in the face of constant and disorienting change. Are we still capable of understanding the world we have created? 'Fascinating... compelling... [Harari] has teed up a crucial global conversation about how to take on the problems of the 21st century' Bill Gates, New York Times 'Truly mind-expanding... Ultra-topical' Guardian A provocative exploration of the tension between our evolutionary history and our modern woes—and what we can do about it. We are living through the most prosperous age in all of human history, yet we are listless, divided, and miserable. Wealth and comfort are unparalleled, but our political landscape is unmoored, and rates of suicide, loneliness, and chronic illness continue to skyrocket. How do we explain the gap between these truths? And how should we respond? For evolutionary biologists Heather Heying and Bret Weinstein, the cause of our troubles is clear: the accelerating rate of change in the modern world has outstripped the capacity of our brains and bodies to adapt. We evolved to live in clans, but today many people don't even know their neighbors' names. In our haste to discard outdated gender roles, we increasingly deny the flesh-and-blood realities of sex—and its ancient roots. The cognitive dissonance spawned by trying to live in a society we are not built for is killing us. In this book, Heying and Weinstein draw on decades of their work teaching in college classrooms and exploring Earth's most biodiverse ecosystems to confront today's pressing social ills—from widespread sleep deprivation and dangerous diets to damaging parenting styles and backward education practices. Asking the questions many modern people are afraid to ask, *A Hunter-Gatherer's Guide to the 21st Century* outlines a science-based worldview that will empower you to live a better, wiser life. What are the grand dynamics that drive the accumulation and distribution of capital? Questions about the long-term evolution of inequality, the concentration of wealth, and the prospects for economic growth lie at the heart of political economy. But satisfactory answers have been hard to find for lack of adequate data and clear guiding theories. In this work the author analyzes a unique collection of data from twenty countries, ranging as far back as the eighteenth century, to uncover key economic and social patterns. His findings transform debate and set the agenda for the next generation of thought about wealth and inequality. He shows that modern economic growth and the diffusion of knowledge have allowed us to avoid inequalities on the apocalyptic scale predicted by Karl Marx. But we have not modified the deep structures of capital and inequality as much as we thought in the optimistic decades following World War II. The main driver of inequality—the tendency of returns on capital to exceed the rate of economic growth—today threatens to generate extreme inequalities that stir discontent and undermine democratic values if political action is not taken. But economic trends are not acts of God. Political action has curbed dangerous inequalities in the past, the author says, and may do so again. This original work reorients our understanding of economic history and confronts us with sobering lessons for today. This open access book consists of essays written by Kishore Mahbubani to explore the challenges and dilemmas faced by the West and Asia in an increasingly interdependent world village and intensifying geopolitical competition. The contents cover four parts: Part One The End of the Era of Western Domination. The major strategic error that the West is now making is to refuse to accept this reality. The West needs to learn how to act strategically in a world where they are no longer the number 1. Part Two The Return of Asia. From the years 1 to 1820, the largest economies in the world were Asian. After 1820 and the rise of the West, however, great Asian civilizations like China and India were dominated and humiliated. The twenty-first century will see the return of Asia to the center of the world stage. Part Three The Peaceful Rise of China. The shift in the balance of power to the East has been most pronounced in the rise of China. While this rise has been peaceful, many in the West have responded with considerable concern over the influence China will have on the world order. Part Four Globalization, Multilateralism and Cooperation. Many of the world's pressing issues, such as COVID-19 and climate change, are global issues and will require global cooperation to deal with. In short, human beings now live in a global village. States must work with each other, and we need a world order that enables and facilitates cooperation in our global village. Recent books have drawn attention to an unfinished gender revolution and the reversal of gender progress. However, this literature primarily focuses on gender inequality in the family and its effect on women's career and family choices. While an important topic, these works? are critiqued for being particularly attentive to the concerns of middle-class, heterosexual, White women and ignoring or erasing the issues and experiences of the vast majority of women throughout the United States (and other countries). ? *Women and Inequality in the 21st Century* is an edited collection that addresses this dearth in the current literature. This book examines the continued inequities navigated by women occupying marginalized social positions within a "nexus of power relations." It addresses the experiences of immigrant women of color, aging women, normative gender constraints faced by lesbian and gender non-

conforming individuals assigned the female gender at birth, religious constraints on women's sexual expression, and religious and ethnic barriers impeding access to equality for women across the globe. Contributors to this collection reflect varying fields of inquiry—including sociology, psychology, theology, history, and anthropology. Their works employ empirical research methods, hermeneutic analysis, and narrative to capture the unique gender experiences and negotiations of diverse 21st-century women. Leading international artists and art educators consider the challenges of art education in today's dramatically changed art world. The last explosive change in art education came nearly a century ago, when the German Bauhaus was formed. Today, dramatic changes in the art world—its increasing professionalization, the pervasive power of the art market, and fundamental shifts in art-making itself in our post-Duchampian era—combined with a revolution in information technology, raise fundamental questions about the education of today's artists. *Art School (Propositions for the 21st Century)* brings together more than thirty leading international artists and art educators to reconsider the practices of art education in academic, practical, ethical, and philosophical terms. The essays in the book range over continents, histories, traditions, experiments, and fantasies of education. Accompanying the essays are conversations with such prominent artist/educators as John Baldessari, Michael Craig-Martin, Hans Haacke, and Marina Abramovic, as well as questionnaire responses from a dozen important artists—among them Mike Kelley, Ann Hamilton, Guillermo Kuitca, and Shirin Neshat—about their own experiences as students. A fascinating analysis of the architecture of major historical art schools throughout the world looks at the relationship of the principles of their designs to the principles of the pedagogy practiced within their halls. And throughout the volume, attention is paid to new initiatives and proposals about what an art school can and should be in the twenty-first century—and what it shouldn't be. No other book on the subject covers more of the questions concerning art education today or offers more insight into the pressures, challenges, risks, and opportunities for artists and art educators in the years ahead. Contributors Marina Abramovic, Dennis Adams, John Baldessari, Ute Meta Bauer, Daniel Birnbaum, Saskia Bos, Tania Bruguera, Luis Camnitzer, Michael Craig-Martin, Thierry de Duve, Clémentine Deliss, Charles Esche, Liam Gillick, Boris Groys, Hans Haacke, Ann Lauterbach, Ken Lum, Steven Henry Madoff, Brendan D. Moran, Ernesto Pujol, Raqs Media Collective, Charles Renfro, Jeffrey T. Schnapp, Michael Shanks, Robert Storr, Anton Vidokle James Martin, one of the world's most widely respected authorities on the impact of technology on society, argues that we are living at a turning point in human history. 'We are travelling at breakneck speed into an era of extremes - extremes of wealth and poverty, extremes in technology, extremes in globalization. If we are to survive, we must learn how to manage them all.' Although we face huge challenges and conflicts, Martin argues that it is in the scientific breakthroughs of the new century that we will find new hope. In a clear, penetrating and insightful style he addresses the key questions of our age and proposes an interconnected set of solutions to its problems. *Advancing Differentiation* will lead you through the process of creating a thriving, student-centered, 21st-century classroom. In 1945, he followed up that first expression of fitness theories and principles with his detailed and definitive book of exercises, *Return to Life through Contrology*. Both of these original books were copyrighted and republished by Presentation Dynamics in 2000 in the book *Pilates' Primer: The Millennium Edition*. Presentation Dynamics has now added 96 new pages of content to this book with the release of *Pilates Evolution for the 21st Century*. It details the very latest in 21st-century modifications, methodology, and enhancements to Joseph Pilates' exercises. The new text opens with an introduction to 21st-century evolutionary developments, discussing how Pilates' original students became the next generation of teachers. It also describes how these students have, in fact, gone on to develop a wide range of variations in their teachings, bringing new science and techniques to new variations in body positioning, balancing, centering, and aligning. In some cases, the teachers use exercise props, and in other cases, this new generation of teachers brings Pilates' methodologies from the ground and mat into standing positions. Other variations in instruction blend Pilates' principles with dance, yoga, and various sports to make Pilates instruction applicable to a growing number of students and disciplines. This new book organizes the new Pilates developments into 10 primary chapters, each focusing on a different 21st-century specialty. Each of these new chapters focuses on a different major area of Pilates evolution, such as standing or circular work, sports-specific Pilates, or Pilates exercise variation with individual props. Each chapter introduces the technique, concept, prop, or emphasis, while the chapter ends with a list of resources from companies specializing in training, certification, videos, or books. The remaining pages present new exercises in the same manner that Pilates introduced his exercises a century ago; that is, a photographic sequence tracing the exercise combined with step-by-step instructions for the student. (There are two or more demonstrative exercises in each of the first nine chapters.) Two facing pages include a series of photographs on the right side with step-by-step instructions on the left side. Visual sequencing allows you to use or teach a novel exercise that is both effective and fun. The instructions include explanations of the various aspects of the exercise, along with modifications for less- or more-advanced bodies. Joseph Pilates based his work on the concept of a balanced body and mind and on the approach espoused by the early Greeks. New practitioners of Pilates' forms and exercises in the 21st century continue to expand upon this earlier work by presenting a variety of creative new approaches involving circular movements, standing postures, and core strengthening exercises using props such as tubes, weights, poles, bands, magic circles, mini-balls, stability balls, foam rollers, and more. Joseph Pilates has been nothing short of revolutionary in his impact on the world of fitness and exercise. You will learn in this book his original observations and conclusions about people's approach to physical fitness. He describes the results of decades of scientific study, experimentation, and research into the variety of troubles and ills that upset the balance of body and mind. You will also learn every single one of his original 34 mat exercises taught to his own students. Living testimony to the validity of his own teachings, Joseph Pilates shares in these writings his fundamental tenets of posture, body mechanics, correct breathing, spinal flexibility, physical education, and his law of natural exercises. It is a fascinating look into Pilates' original thinking and represents the foundation of an entire discipline embraced by fitness enthusiasts, health educators, and exercise trainers around the world. This illuminating study critiques the concept of leadership as understood in the last 75 years and looks to the twenty-first century for a reconstructed understanding of leadership in the postindustrial era. More similarities in past

decades were found than had been thought; the thread throughout Rost's book is that leadership was conceived of as good management. He develops a new definition and paradigm for leadership in this volume that distinguishes leadership from management in fundamental ways. The ethics of leadership from a postindustrial perspective completes the paradigm. The book concludes with suggestions that can be immediately utilized in helping to transform our understanding of leadership. In the freshest new international law text in 20 years, Christopher C.
