Builders Building an Affordable House Home Builder's Guide to Construction in Wildfire Zones

Master builder Larry Haun brings you this complete, step-by-step guide to building a house. Focusing on the experience of one of Scotland's foremost house-builders during the 19th and 20th centuries, this book features essays by several leading architectural, social and economic historians including copious illustrations, statistical information and documentary evidence. A summary guide to the Mactaggart & Mickel architectural archive, which forms part of the RCAHMS collection, is also included. In 1859, Dubliners strolling along country roads witnessed something new emerging from the green fields. The Victorian house had arrived: wide red brick structures stood back behind manicured front lawns. Over the next forty years, an estimated 35,000 of these homes were constructed in the fields surrounding the city. The most elaborate were built for Dublin's upper middle classes, distinguished by their granite staircases and decorative entrances. Today, they are some of the Irish capital's most highly valued structures, and are protected under strict conservation laws. Dublin's Bourgeois Homes is the first in-depth analysis of the city's upper middle-class houses. Focusing on the work of three entrepreneurial developers, Susan Galavan follows in their footsteps as they speculated in house building: signing leases, acquiring plots and sourcing bricks and mortar. She analyses a select range of homes in three different districts: Ballsbridge, Rathgar and Kingstown (now Dun Laoghaire), exploring their architectural characteristics: from external form to plan type, and detailing of materials. Using measured surveys, photographs, and contemporary drawings and maps, she shows how house design evolved over time, as bay windows pushed through façades and new lines of coloured brick were introduced. Taking the reader behind the façades into the interiors, she shows how domestic space reflected the lifestyle and aspirations of the Victorian middle

classes. This analysis of the planning, design and execution of Dublin's bourgeois homes is an original contribution to the history of an important city in the British Empire. Produce accurate estimates for nearly any residence in just minutes. Stone House Construction is a comprehensive study of Australian stone building techniques in a residential context, for people with an interest in building or renovating, including property owners, architects and builders. It has a strong theme of historic stone buildings, as traditional forms of building respond to the need for structural integrity and stability over time against weathering. The book covers aspects of building in locally sourced stone, from quarrying on-site to building arches over openings for upper storey walls, and is a source book of examples and methods to help the reader to carry on a tradition of building in local stone. Stone buildings inspire people because they transfer a natural beauty to a human achievement. The book shows many examples of Australian stonework that have not been given exposure in previous architectural references. It promotes Ecologically Sustainable Development (ESD) through the continuation of a stonework tradition in Australia. Here,

builders will find the information they need to create a marketing plan, budget for marketing, gather basic marketing information, manage sales people, run a "PR" campaign, and conduct promotional events. It includes the major steps involved in the process of selling through the close, move-in, warranty service, and asking for referrals. Covering the whole of the United Kingdom and Eire. Bigger Isn't Necessarily Better examines the performance and operation of the US homebuilding sector based on a detailed survey of large home builders conducted by the authors in the period of the great building boom of the 2000s. In contrast to the many books that have focused on the financial side of the housing sector prior to the Great Recession, the book examines the operational side of the industry and what did, and, more importantly, what did not, happen during the period of unprecedented growth. Despite the rise of very large, national homebuilders during the boom years from 1999 to 2005 and the consolidation of the industry that accompanied it, the authors find that major homebuilders often did not adopt innovations in areas ranging from information technology, supply chain practices, and work site management, nor improve their operational performance. Given this, the book discusses what homebuilders can learn from other industries as they face a challenging future.

When a family's problems become so severe that traditional community resources are unable to help them effectively, caseworkers are usually advised to place children outside the home. Family preservation services such as Homebuilders are designed to give caseworkers and families another option: services that are more intensive, accessible, flexible, and goal-oriented than conventional supports. Instead of relieving family pressure by removing a child, the approach described here adds resources to alleviate pressure and to facilitate the development of a nurturing environment for children within the context of the family. Whereas crisis intervention attempts to resolve immediate problems their approach enables the family to function better after

the crisis than before. In addition to their obvious social benefits, family preservation services are cost effective. Straightforward and practice-oriented, *Keeping Families Together* profiles the kinds of families that are assisted by prevention services such as this, tracing the salient features of its innovative approach to crisis intervention, its organizational features, and its knowledge and research base. Rich in actual examples drawn from family practice, this book will be of great interest to beginning students as well as practitioners in family and children's services. The book is also intended for those who are considering beginning their own Family Preservation Services to evaluate whether or not the approach will be a good fit for them, to become aware of some of the complexities of program design and training so that they can make informed decisions. When the book first appeared, *Contemporary Psychology* said that it "speaks for itself as a wonderful description of how to be of help to families in crisis."
